

The Journal of Economics and Technologies Knowledge

GUIDE FOR ARTICLE WRITING, SUBMISSION, REVIEW & COPYRIGHT

1. Submission process

All articles need to be submitted at the following e-mail address: jetk@e-editura.ro or jetk2014@gmail.com

ALL ARTICLES WILL BE SUBMITTED ONLY IN ENGLISH.

As you will see below there are requirements concerning the DPI resolution of photos or other graphic elements from articles so if the total size is exceeding 5 MB please use the free platform www.wetransfer.com, specifying one of the e-mail addresses mentioned above.

In the e-mail, or in the archive submitted using www.wetransfer.com the following elements must be provided:

1. FULL NAME and title
2. Institution (company or university)
3. E-mail address
4. Mobile phone number
5. Postal address
6. Europass Curriculum Vitae (<http://europass.cedefop.europa.eu/en/documents/curriculum-vitae>)
7. Photo of author (large resolution for print – min. 300DPI)
8. Article in Microsoft Word format (.doc or .docx)
9. Declaration of acceptance of copyright & open access agreement ([download here](#))

10. Any photo or graphics in the articles, in JPG, TIFF or PDF format, with minimum 300 DPI resolution, for print.

2. Article requirements

Any article needs to have the following:

a.) **Title, Authors' Names, and Institutional Affiliations**

- Function: Your paper should begin with a Title that succinctly describes the contents of the paper. Use descriptive words that you would associate strongly with the content of your paper. A majority of readers will find your paper via electronic database searches and those search engines key on words found in the title.

b.) **Key words**

- No more than 5-10 key words

c.) **Abstract**

- Function: An abstract summarizes, in one paragraph (usually), the major aspects of the entire paper in the following prescribed sequence:
 - the question(s) you investigated (or purpose), (from Introduction)
 - state the purpose very clearly in the first or second sentence.
 - the experimental design and methods used, (from Methods)
 - clearly express the basic design of the study.
 - Name or briefly describe the basic methodology used without going into excessive detail-be sure to indicate the key techniques used.
 - the major findings including key quantitative results, or trends (from Results)
 - report those results which answer the questions you were asking
 - identify trends, relative change or differences, etc.
 - a brief summary of your interpretations and conclusions. (from Discussion)
 - clearly state the implications of the answers your results gave you.
- Whereas the Title can only make the simplest statement about the content of your article, the Abstract allows you to elaborate more on each major aspect of the paper. The length of your Abstract should be kept to about 200-300 words maximum (a typical standard length for journals.) Limit your statements concerning each segment of the paper (i.e. purpose, methods, results, etc.) to two or three sentences, if possible. The Abstract helps readers decide whether they want to read the rest of the paper, or it may be the only part they can obtain via electronic literature searches or in published abstracts. Therefore, enough key information (e.g., summary results, observations, trends, etc.) must be included to make the Abstract useful to someone who may to reference your work.

d.) **The body of the article**

- No more than 2000-2500 words (about 5-6 A4 pages +/-, including photos and graphics, and citation list at the end);
- Font: *Arial*, Size 12, Paragraph *Single line*, *Full Justify*, *italic* or **bold** permitted;

- Tables and figures are particularly valuable for conveying large amounts of information and for showing relationships among data. The expanding development of advanced tools for graphic display provides authors with greater flexibility and capability for illustrating their results. Such tools can convey information in visually engaging ways that facilitate the reader's understanding of comparisons and evaluations of change over time. Authors should avoid duplicate reporting of data but instead should decide on the most comprehensible ways of presenting the information, whether it is through text or through tabular or graphic form;
- DO NOT USE FOOTNOTES: Footnoting, although commonly done in books and other literary writing, is only rarely done in journal style papers;
- DO NOT USE DIRECT QUOTES From Published Material: In 99.99% of the cases, the information you want from a research article is an objective result or interpretation. How the author stated this information, i.e., their prose, is of little importance compared to the results or interpretations themselves. Take the information and put it into your own words; avoid paraphrasing since this can potentially lead to plagiarism;
- At the end of your article you need to have all citation entries listed in alphabetical order based the first author's last name;
- If the same author(s) are cited for more than one paper having the same order of authors' names, the papers should be listed in chronological sequence by year of publication;
- Authors' names MUST be listed in the citation in the same order as in the article;
- An example for citations at the end, can be accessed on the University of Washington Library Website:
<http://www.lib.washington.edu/help/guides/42CBE.pdf>

3. Plagiarism

- The Journal of Economics and Technologies Knowledge has a ZERO tolerance for PLAGIARISM.
- All articles prior to the review process go through an analysis on an ANTI PLAGIARISM SOFTWARE. The result will be e-mailed to the author prior to the review results.

4. The review process

A key convention in the publication of research is the peer review process, in which the quality and potential contribution of each manuscript is evaluated by one's peers in the scientific community. Like other scientific journals, JETK routinely utilize a peer review process to guide manuscript selection and publication decisions.

Authors can expect their manuscripts to be reviewed fairly, in a skilled, conscientious manner. Reviewers are held to demanding standards: They must

- a.) present a clear decision regarding publication, considering the quality of the manuscript, its scientific contribution, and its appropriateness for JETK;

- b.) support the recommendation with a detailed, comprehensive analysis of the quality and coherence of the study's conceptual basis, methods, results, and interpretations; and
 - c.) offer specific, constructive suggestions to authors.
- The party responsible for the review process is JETK Academic Board.

5. Response after the review of the article

An author can get the following response after the review of the article submitted:

- **Accepted:** It will be published in the form you submitted;
- **Accepted with revision:** it will be published but with some minor changes;
- **Revise and resubmit:** the article needs to be revised and submitted again;
- **Rejected:** it will not be published (including in case of plagiarism).

6. Copyright, open access, and permission to reuse

a.) *Copyright for authors*

Authors (or their employers) retain their copyright in the article. All we require from authors is an exclusive license (or, from government employees who cannot grant this, a non-exclusive license) that allows us to publish the article in JETK (including any derivative products) and any other JETK products (such as the website or overseas editions, special editions, collections), and allows us to sub-license such rights and exploit all subsidiary rights.

b.) *Permissions for authors*

Thus authors may use their own articles for the following non-commercial purposes without asking our permission (and subject only to acknowledging first publication in JETK and giving a full reference or web link, as appropriate).

Posting a pdf of their own article on their own personal or institutional website for which no charge for access is made.

Authors can make a reasonable number of copies for personal or non commercial professional use. This includes the contributor's own teaching purposes.

Republishing part or the full article in a book or other publication edited by the author, must be accompanied with the citation of JETK source.

Using individual figures or tables or extracts of text (up to 250 words) in other publications published by a third party.

Using the article in a course pack or compilation (whether paper or electronic) in the authors' institution. This does not apply if a commercial charge is made for the compilation or training programmed.

c.) *Third parties: Permission to reuse*

Anyone else (other than the author of a particular paper) who wants to reproduce a JETK article needs to ask our permission. We are usually happy to give permission, though in some cases we will charge a fee.

d.) Open access

The *JETK*'s open access articles are all the research articles that we publish.

By default, we publish these articles under a Creative Non Commercial License that allows reuse subject only to the use being non-commercial and to the article being fully attributed (<http://creativecommons.org>).
